Abstract

Sentence ordering is a general and critical task for natural language generation applications. Previous works have focused on improving its performance in an external, downstream task, such as multi-document summarization. Given its importance, we propose to study it as an isolated task. We collect a large corpus of academic texts, and derive a data driven approach to learn pairwise ordering of sentences, and validate the efficacy with extensive experiments. Source codes¹ and dataset² of this paper will be made publicly available.

(1) He liked music when he was a boy. (2) People are shocked by his potential. (3) Chopin is a great musician in Poland. (4) When he was 15, he finished his first waltz.
--

Gold: (3) (1) (4) (2)

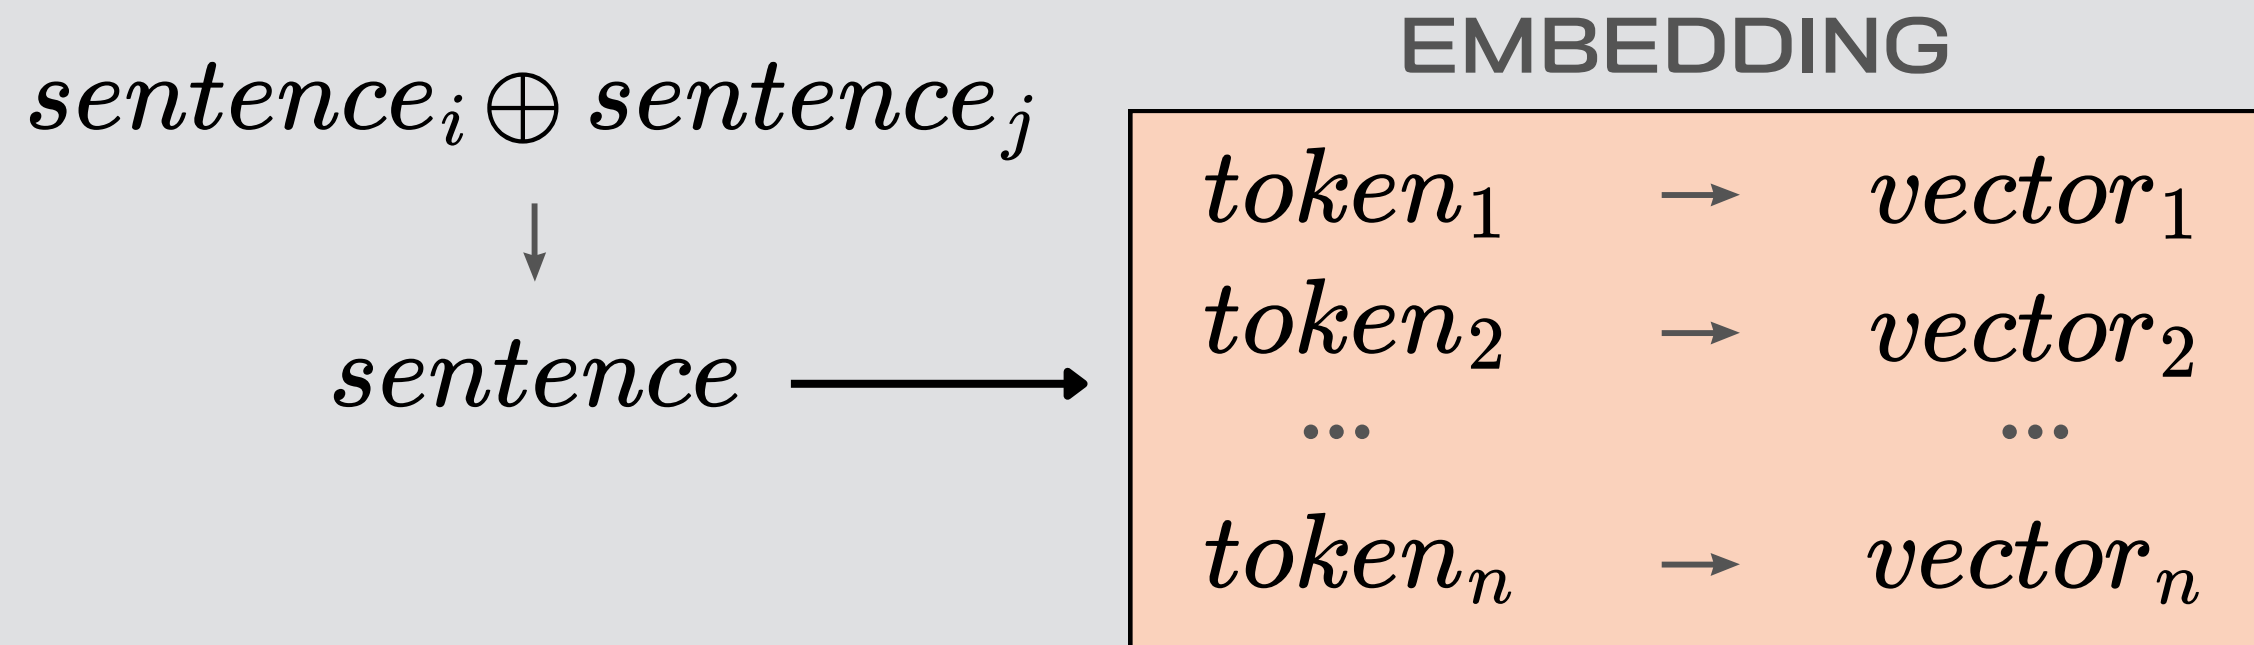

Table 1: Illustration of sentence ordering task. Multiple discourse coherence relations might appear in a single text. First sentence (3) declares a topic. Sentences (1) (4) are in chronological sequence. However, sentence (2) is a result, so it should be the last sentence so as to abide to a cause-effect relation.

One-loop $\mathcal{N}=8$ Supergravity Amplitudes from MHV Diagrams

Abstract

We discuss the calculation of one-loop amplitudes in $\mathcal{N} = 8$ supergravity using MHV diagrams. In contrast to MHV amplitudes of gluons in Yang-Mills, tree-level MHV amplitudes of gravitons are not holomorphic in the spinor variables. In order to extend these amplitudes off shell, and use them as vertices to build loops, we introduce certain shifts for the spinor variables associated to the loop momenta. Using this off-shell prescription, we rederive the four-point MHV amplitude of gravitons at one loop, in complete agreement with known results. We also discuss the extension to the case of one-loop MHV amplitudes with an arbitrary number of gravitons.

23. 다음 글의 주제로 가장 적절한 것은?

From your brain's perspective, your body is just another source of sensory input. Sensations from your heart and lungs, your metabolism, your changing temperature, and so on, are like ambiguous blobs. These purely physical sensations inside your body have no objective psychological meaning. Once your concepts enter the picture, however, those sensations may take on additional meaning. If you feel an ache in your stomach while sitting at the dinner table, you might experience it as hunger. If flu season is just around the corner, you might experience that same ache as nausea. If you are a judge in a courtroom, you might experience the ache as a gut feeling that the defendant cannot be trusted. In a given moment, in a given context, your brain uses concepts to give meaning to internal sensations as well as to external sensations from the world, all simultaneously. From an aching stomach, your brain constructs an instance of hunger, nausea, or mistrust.

* blob: 형태가 뚜렷하지 않은 것

- ① influence of mental health on physical performance
- ② physiological responses to extreme emotional stimuli
- ③ role of negative emotions in dealing with difficult situations
- ④ necessity of staying objective in various professional contexts
- ⑤ brain's interpretation of bodily sensations using concepts in context

• Prompt 예시

지금부터 수능 영어 문장삽입 문제를 푼다. 그리고 그 근거 단어들을 추출할 것이다. 반드시 아래 절차를 순서대로 수행하라.

태스크 정의

[1] 문제 이해 - raw_text를 읽고 글의 전체 흐름을 요약하라 (1~2문장)

[2] 삽입 문장 분석 - box_text의 핵심 기능을 정의하라 (예: 원인, 결과, 예시, 추가 설명, 대비, 문제, 해결 등)

[3] 각 위치별 평가 (해당 번호 ①~⑤ 모두) 각 위치마다 다음을 수행하라: - '해당 번호' 앞 뒤 문장의 핵심 내용 요약 - '해당 번호' 자리에 box_text가 들어갔을 때 자연스러운지 평가하라. 다시 말하지만 '해당번호 앞뒤에 들어가는게 아니라, 해당 번호에 번호를 지우고 box가 들어갔을때' - '연결 논리 전환', '주제 변경', '문제해결' '글의 응집성', '지시어 비교' 등을 기준으로 적합도 점수를 구하라.

예시 풀이로직

예1) box 가 A (A 는 대상이 될 수도 있고, 주제가 될 수도 있다.)에 대해 설명하고 있는데, 삽입하고자 하는 '해당번호' 앞 뒤로 B (B는 대상이 될 수도 있고, 주제가 될 수도 있다.) 에 대해 얘기하고 있다면, box 에서 전환의 시그널이 없고, box 뒤에 다시 전환의 시그널이 없는 한(시그널은 지시어나, 접속사가 되겠지) 해당 번호에 box 가 들어가면 자연스럽지 않을 것이다.

예2) box 에서 this 로 받고 있는 대상이 있으면, 적어도 삽입을 하고자 하는 번호 앞에 this 와 연결이 되는 대상이 구체적으로 나와야 할 것이다.

예3) 구체적인 사례의 성격을 box 가 가지고 있다면, 앞에 구체적 사례의 일반적 형식에 대해 나와야 한다.

‘ 이러한 예시는 단순히 풀이의 예시일 뿐이지, 너가 무조건 이렇게 풀어야 한다는 것은 아님 ‘

출력 형식

[4] 너가 모든 '해당 번호' 에 box 를 넣어서 가능성이 가장 높은, 하나의 번호를 출력해줘

[5] CSV 출력 columns = problem, answer, reasoning - problem: 파일명_문제번호 - answer: 정답 번호 - reasoning: 가장 중요한 근거 단어/구 5개 (심표 구분)

[중요 규칙] - \n, \r 은 의미 없는 기호로 처리 - 괄호 번호 기준으로 위치 판단 - 절대 인터넷 검색 금지

결과 : 정답률

순서배열 117개 / 문장삽입 119개

2017년 : 07월 ~ 11월 (10문제씩)

But cute and beautiful designs also have downsides.

Research finds that people show a strong visceral interest in and desire to approach and own cute-looking and beautiful (elegant) designs. (①) However, cute and beautiful designs elicit two very different motivations. (②) A cute product or package design elicits a nurturing motivation — a desire to take care of and keep the product, to hold it dear to our hearts and never let it go. (③) The beautiful product or package design elicits a self-expressive, or signaling, motivation — a desire to express oneself to others through product ownership. (④) Certain types of cute products can be associated with a lack of sophistication or seriousness, which can reduce performance expectations (lowering perceived enablement benefits). (⑤) Beautiful-looking designs may not attract attention over time because people become desensitized to them.

* visceral: 본능적인 ** elicit: 이끌어 내다

Q1. 위치를 결정하는 데 근거가 된 단어나 표현에 밑줄을 그으세요. (5개)

※ 특정 순서가 적절하다고 판단한 근거, 또는 부적절하다고 배제한 근거 모두 포함하여 선택해 주세요.

Q2. Q1에서 밑줄 친 것 중 가장 결정적이었던 단어나 표현 하나에 동그라미 표시를 해 주세요. (반드시 하나)

실제 분석 단위는 Q1의 밑줄 5개이며,
Q2는 응답의 질 향상을 위한 장치.

응답자는 밑줄을 치는 동시에 '이 중 하나를 골라야 한다'는 것을 인지하기 때문에, Q1 단계에서부터 더 신중하게 근거에 집중하게 됨

Human test

LLM 과 비교했을 때보다는 attention 과 gradient가 비교적 균일!
하지만 아직 gradient가 약간 더 높음.

문장삽입

순서배열

Sentence Ordering 에서 **Attention layer** 보다 **Gradient** 가 더 유용한 근거를 설명해 준다.

따라서 Attention 은 모델 내부의 주목한 단어를 상징할 수 있으나, 그대로 explainable한 근거가 될 수 없다.

따라서 **explainable 은 gradient!!**

모델 성능을 더 끌어올린 다음, 수능 영어 시를 만들어 보자
